FOREWORD

The need to find ways of combating juvenile delinquency is assuming new urgency and importance for us all. During the past few years an increasingly large number of our young people have been coming before the courts. During the next few years, when there will be more boys and girls of juvenile-court age than ever before, this trend may become most acute. Certainly there will be more young people to help keep out of trouble. Those who are in conflict with the law will need help if their delinquency is not to become a permanent pattern of behavior.

How are we to face this problem?

Increased knowledge and understanding will better prepare us to deal with it than we have been able to do previously. This bibliography is intended to extend this knowledge and understanding. Prepared primarily for professional workers, it should be useful also to the layman oriented to social problems and concerns. The books, research studies, pamphlets, and articles listed here represent up-to-date thinking on matters of cause, prevention, and treatment of juvenile delinquency.
